Supplemental tables and figures

Contact: Lia Ossanna, lossanna@arizona.edu or lossanna@nmsu.edu
Last updated: 2026-04-07

This document includes all the supplemental tables and figures that accompany "Precipitation and slope moderate associations between native shrubs and invasive buffelgrass (*Pennisetum ciliare*) growth in the Sonoran Desert" by Ossanna et al. (2026).

Tables

Table S1. Actual values averaged by year

Actual values of variables measured, averaged across all plots for each year (to contextualize year-to-year change values used in analyses). Precipitation measured in mm, buffelgrass density measured in individuals per m^2, and cover measured in percent.

		Buffelgrass				Native vegetation	
Year	Precipitation	Total culms	Repro culms	Density	Cover	Shrub cover	Herb cover
2020	222	24 ± 19	12 ± 13	3.8 ± 1.5	39 ± 19	18 ± 12	5.9 ± 10.5
2021	361	37 ± 33	14 ± 16	8 ± 7.5	40 ± 21	13 ± 8	9.8 ± 8.7
2022	264	52 ± 40	25 ± 24	6.7 ± 4.1	35 ± 17	12 ± 9	5.1 ± 6.3
2023	249	126 ± 80	51 ± 35	3 ± 1.5	38 ± 14	22 ± 12	2.7 ± 2.6

Table S2. Total culms model

Model coefficients of the total buffelgrass culm count model (response variable: year-to-year change in total number of culms). Marginal $R^2 = 0.137$; conditional $R^2 = 0.466$.

Coefficient	Estimate	Std. Error	df	t value	Pr(>|t|)

Figures

Figure S1

Figure S1. Precipitation conditions at each site during the study. Red dashed lines indicate mean annual precipitation of each site.

Figure S2

Figure S2. Relationship between year-to-year change in native herbaceous cover and year-to-year change in buffelgrass reproductive culm count. Purple line represents model-predicted values. Vertical red dashed line indicates no change in herbaceous cover while horizontal line indicates no change in the number of reproductive buffelgrass culms.

Figure S3

Figure S3. Simple linear regression of (A) year-to-year change in native shrub cover and (B) year-to-year change in native herbaceous cover as a function of the previous year's precipitation, pooling all sampling locations and times. Horizontal red dashed lines indicate no change in shrub or herbaceous cover.

Figure S4

Figure S4. Relationship between year-to-year change in buffelgrass density of the plot and year-to-year change in the total buffelgrass culm count. Purple line represents model-predicted values. Vertical red dashed line indicates no change in buffelgrass density while horizontal line indicates no change in the total number of buffelgrass culms.

Figure S5

Figure S5. Relationship between initial buffelgrass density of the plot and year-to-year change in total buffelgrass culm count. Purple line represents model-predicted values. Horizontal red dashed line indicates no change in the number of buffelgrass culms.

Figure S6

Figure S6. Relationship between initial buffelgrass density of the plot and year-to-year change in buffelgrass reproductive culm count. Purple line represents model-predicted values. Horizontal red dashed line indicates no change in the number of reproductive buffelgrass culms.

Figure S7

Fig. S7. Relationship between initial buffelgrass cover of the plot and year-to-year change in buffelgrass cover of the plot. Purple line represents model-predicted values. Horizontal red dashed line indicates no change in buffelgrass cover within the plot.

Figure S8

Figure S8. Simple linear regression of year-to-year change in buffelgrass plot density as a function of year-to-year change in buffelgrass plot cover, pooling all sampling locations and times. Vertical red dashed line indicates no change in buffelgrass cover while horizontal line indicates no change in buffelgrass density.

Figure S9

Figure S9. Simple linear regression of year-to-year change in buffelgrass total culm count as a function of year-to-year change in buffelgrass plot cover, pooling all sampling locations and times. Vertical red dashed line indicates no change in buffelgrass cover while horizontal line indicates no change in buffelgrass total culm count.

Figure S10

Figure S10. Relationship between buffelgrass seedling survival and buffelgrass density in the plot. Purple line represents model-predicted values.

Figure S11

Figure S11. Relationship between buffelgrass seedling survival and native shrub cover in the plot. Purple line represents model-predicted values.
